

1. Change the DateTimeFormatter pattern

Current:

```
«» Java
private final DateTimeFormatter dateFormat =
    DateTimeFormatter.ofPattern("uuuu-MM-dd")
        .withResolverStyle(ResolverStyle.STRICT);
```

Change to:

```
«» Java
private final DateTimeFormatter dateFormat =
    DateTimeFormatter.ofPattern("dd/MM/uuuu")
        .withResolverStyle(ResolverStyle.STRICT);
```

Why use `uuuu` instead of `yyyy`?

When using `ResolverStyle.STRICT`, Java recommends:

```
«» Java
dd/MM/uuuu
```

instead of:

```
«» Java
dd/MM/yyyy
```

because `uuuu` handles year validation more correctly with strict parsing.
