

My current Main class has a separate TrainingSessionList and calls manageTrainingSessions(scanner). Is this a good separation of UI flow and training CRUD logic, or should Main contain the training menu logic directly?

Your current design is **better than putting all training menu logic directly into Main**.

Current structure

Something like:

Java

```
public class Main {  
    public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);  
  
        TrainingSessionList trainingList = new TrainingSessionList();  
  
        trainingList.manageTrainingSessions(sc);  
    }  
}
```
